Vanderburgh County Health Department Vector Control Adulticiding Notification

EVANSVILLE, September 8, 2016- The Vanderburgh County Health Department is continuing to perform Adult Mosquito Control (adulticiding) in areas where significant mosquito and/or West Nile Virus activity has been found. A total of 2 sample groups of mosquitoes from surveillance traps collected within Vanderburgh County have tested positive for West Nile Virus this year. The adulticiding operation will take place the evening of Friday September 9, 2016, weather permitting. Fogging will be conducted during the hours of 8:00PM and 12:00AM.

The spraying will be within an area bound by Lincoln Ave., S. Boeke Rd., Washington Ave, and U.S. Hwy 41. A map of the area has been included with this release. If weather conditions prevent completion of the adulticiding on the designated date, fogging will resume on the next available day.

The Vanderburgh County Health Department will continue to focus its efforts on habitat elimination, education, and treatment of stagnant or standing water as these are the most effective forms of mosquito control.

The Health Department is asking residents to:

- ◆ Limit time outdoors between dusk and dawn, when mosquitoes are most active. Wear light colored clothing, pants, and long sleeves when possible.
- ◆ Use insect repellant containing DEET, Picaridin, or Oil of Lemon Eucalyptus. (Products containing DEET should not be used on infants aged <2 months of age and those containing Oil of Lemon Eucalyptus should not be used on infants <3 years of age); and
- ◆ Make sure your property is free of any standing water, which could be breeding grounds for mosquitoes that carry the virus. Empty flowerpots, buckets, old tires, trash cans, and clogged gutters. Keep the grass cut and landscaping trimmed as adult mosquitoes use overgrown areas as safe places to rest.
